No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                        US-10-612-779-30

Sequence 48073, Application US/09270767

Sequence 48073, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION:

FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 48073

LENGTH: 114

Sequence 28218, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4;
                                                                                                                                                                                                                                                                                67

GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABII
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
                                                                                                                   APPLICANT: Lynn A Doucette-Stamm and David Bush
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        79 GNIIIERKIIHELGLCGHIEDIAVNSKYQGQGLGKLLIDQLVTIGFDYGCYKI--ILDCD 136

"The crystal structures of Apo and complexed Saccharomyces cerevisiae GNA1 shed light on the catalytic mechanism of an amino-sugar N-acetyltransferase.";
J. Biol. Chem. 276:16328-16334 (2001).
I- CATALYTIC ACTIVITY: Acetyl-CoA + D-glucosamine 6-phosphate = CoA + Nacetyl-D-glucosamine 6-phosphate.
I- PATHWAY: UDP-GLOMAc biosynthesis from Fru-6-P; second step.
I- SUBUNIT: Homotetramer.
I- SUBUNIT: Homotetramer.
I- SUBUNIT: Belongs to the acetyltransferase family. GNA1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ensembl; YF1017C; Saccharomyces cerevisiae.

-!- CATALYTIC ACTIVITY: Acetyl-CoA + D-glucosamine 6-phosphate = CoA - CATALYTIC ACTIVITY: Acetyl-CoA + D-glucosamine 6-phosphate.

Nacetyl-D-glucosamine 6-phosphate.

-!- PATHWAY: UDP-GloNAc biosynthesis from Fru-6-P; second step.

-!- SMILARITY: Belongs to the acetyltransferase family. GNA1
                                                                                                                                                                                                                                                                  Glucosamine 6-phosphate N-acetyltransferase (EC 2.3.1.4) (Phosphoglucosamine transacetylase) (Phosphoglucosamine acetylase)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                       RESULT 4

US-09-115-475-16

is Sequence 16, Application US/09115475

j Patent No. 6372457

j GENERAL INFORMATION:

j APPLICANT: BETYY, Alan

j APPLICANT: Bullingame, Richard P.

j TITLE OF INVENTION: PROCESS AND MATERIALS FOR PRODUCTION OF GLUCOSAMINE

j TITLE OF INVENTION PROCESS AND MATERIALS FOR PRODUCTION OF GLUCOSAMINE

j TITLE REFERENCE: 316-18-C1

j CURRENT APPLICATION NUMBER: DS/09/115,475

j CURRENT FILING DATE: 1998-07-15

j EARLIER PLILING DATE: 1998-01-14

j EARLIER FILING DATE: 1998-01-14

j EARLIER FILING DATE: 1998-01-14

j RARLIER FILING DATE: 1998-01-14

j SARLIER FILING DATE: 1998-01-14

j SARLIER FILING DATE: 1998-01-14

j SARLIER FILING DATE: 1997-01-14

j SOFTWARE: PATENTION NUMBER: 00/035,494

j SOFTWARE: PATENTION OF 00.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT APPLICATION NUMBER: US 00/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 10691
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

Sequence 2182, Application US/09540236

Patent No. 6673910

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATARF
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2005-001
CURRENT APPLICATION NUMBER: US/09/540,236
CURRENT PILING DATE: 2000-04-04
NUMBER OF SEQ ID NOS: 3840

SEQ ID NO 2182
                                                                                                                                                                                                                                                                                                                                                                                                          7;

                                                                                                                                                                                                                                                                         APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
LENGTH: 613
